RESEARCH INTERESTS

My research interests span a spectrum of reinforcement learning, multi-agent systems and game theory. Recently, I have aimed to solve issues modelled as multi-agent systems from reinforcement learning and game-theoretic perspectives. Along this line, my ultimate goal is to reinforce the insights into theories of applying reinforcement learning in conjunction with game theory. An important thread of my research is reinforcement learning with many agents, where I attempt to explore exciting methods in such scenarios by combining reinforcement learning and the mean-field theory. Lately, my focus has moved to applying reinforcement learning and large language models in reasoning, behaviour modelling, and, more broadly, ethical AI and responsible AI.
